I2C Bus Protection – IMU

I2C Bus Protection – Power Monitor & USB Charger

NOTE

These novel bus protection circuits prevent traditional I2C/SPI failure modes where a single slave failure can disable the entire bus.

Learn more:
<https://doi.org/10.36227/techrxiv.15166620>

By default, slave clock and/or data lines can be held low and the Master (SAMD51) will still be able to communicate with the remainder of the bus.

They can individually be bypassed by removing the transistor(s) and soldering the 0ohm the jumpers below.

SPI Bus Protection – SD Card and Payloads

SPI Bus Protection – Radio 1

SPI Bus Protection – Radio 2

Bus Protection – Bypass Jumpers

NOTE: Components labeled "do not install" (DNI) are not populated by default
